SOUND & VIDEO SYSTEMS DESIGN

SERVING NORTHERN ILLINOIS, INDIANA AND SOUTHERN WISCONSIN

**NEED SOMEONE YOU CAN TRUST TO TAKE CARE OF YOUR SOUND SYSTEM?  
R&M WILL MAKE IT HAPPEN.**

## CAN YOU FIND THE NEW SPEAKERS?

It is a challenge to design a sound system that is both acoustically correct and aesthetically pleasing. It takes years of experience and training to understand what a specific room calls for.

R&M Consulting has been designing successful solutions to challenges for over 40 years, and has experience in system engineering that extends to over 50 years ago.

Let us help your church sanctuary, school auditorium, gymnasium, or critical performance space. We are a phone call away, and here to serve you with your sound system needs. It is possible for your space to have a natural sounding, reliable system that can barely be seen by your attendees (see the picture above).

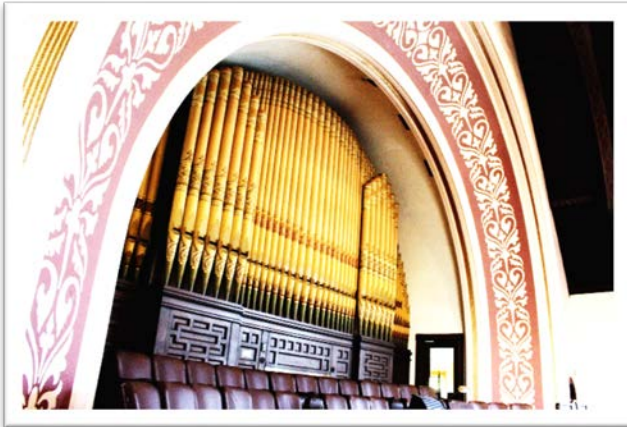

## DO YOU HAVE THE RIGHT

## MICROPHONES?

## LET US HELP YOU WEAN OUT THAT VINTAGE EQUIPMENT.

Fall is here and winter is coming fast. A good way to improve your system for the holiday season is to upgrade wired and wireless microphones. If you experience unwanted noise coming through your sound system, it is possible that the problem is as simple as a damaged microphone, or cable. R&M Consulting can speak with you over the phone to discover more about your microphone needs, and even bring options for you to try out. Very successful options are professional digital wireless mics, and new sensitive slim gooseneck mics, all items that R&M Consulting can provide for you to experience.

**Trust us to help you with your sound system. Give us a call and R&M Consulting will work with you to improve your system. We take our work and your time very seriously. R&M will make it happen.**

## **NO TWO CHOIR AREAS ARE ALIKE**

Pipe Organ, Electric Keyboard, Drum Set, Acoustic Guitar, Cello, Recorded Tracks, Electric Guitar, Bass Guitar, Harp, the list goes on. These are just some instruments that accompany a church choir. Many choir directors are given the wrong tools, or incorrect training on how to use what they have to amplify the choir area. A choir director may also experience times when the vocal and instrument microphones cause feedback, and still are not loud enough for the congregation to hear over the leading accompanist. Factors that could cause this are misadjusted stage monitors, too many microphones on at one time, or a leading accompanist that insists they can't hear themselves, so they blast their feed into the main sound system instead of a personal monitor. Then the choir director is left fighting the issues and dealing with complaints, but they don't have the necessary training to resolve the problems.

## **LET R&M CONSULTING HELP YOUR CHOIR**

We can design a new choir system for your space, or update and repair an existing system. Members of our trained design team have years of experience as professional musicians. This allows communication to effortlessly flow between the client and R&M Consulting, resulting in a rewarding experience for the client.

Who do you trust to consult with as the winter season approaches? We strongly suggest to not trust the internet. This is due to our understanding of how many churches in the Chicago area wasted time and money, and then ended up with the wrong system for their needs.

**Let R&M Consulting help with choir sound system needs, main sound reinforcement, new design efforts, and system troubleshooting today.**
